

Role: Manager - Big Data

Department: Technology

Location: Mumbai

Job Role:

Design, develop, and maintain scalable data pipelines and architectures using Scala, Spark, Python, Unix, and SQL.

Job Responsibilities:

- Collaborate with cross-functional teams to gather and understand data requirements.
- Optimize and tune existing data processes for improved performance and reliability.
- Lead and mentor junior team members, providing technical guidance and support.
- Stay updated with emerging technologies and trends in big data and cloud computing.
- Communicate effectively with stakeholders to understand business needs and translate them into technical requirements.
- Ensure compliance with data security and privacy regulations.

Job Specification:

- Master's degree in Information Technology, Computer Science, Engineering, or related field.
- Minimum of 6 years of experience in big data engineering roles.
- Proficiency in Scala, Spark, Python, Unix, and SQL.
- Experience with cloud platforms, especially AWS, is a plus.
- Strong problem-solving skills and attention to detail.
- Excellent communication and interpersonal skills.
- Ability to work independently and in a team environment.
- Proven leadership and managerial skills.
